

PERSONAL WEALTH CALCULATOR · PLAN REPORT

The Rao family's wealth plan

A snapshot of where your money stands today, what your goals will cost, and how much more they need.

Generated on 27 September 2026, 7:17 pm.

HOW TO READ THIS REPORT

- **Blue** amounts are in **today's money**: what things cost or are worth now.
- **Purple** amounts are **future money**: what something will cost in the year it happens, after prices rise, or what savings may grow to by then.
- **L** means lakh (₹1,00,000) and **Cr** means crore (₹1,00,00,000).
- All figures are **estimates before tax**, based on the numbers you entered and the assumptions on the last page. They are calculations, not financial advice.

Monthly balance

₹53,000

What is left each month after spends, loan EMIs, investments, insurance and your share of yearly costs. This is the money available for goals.

Net worth

₹25.1 L

Everything you own (savings, investments, property) minus everything you owe (loans), at today's value.

Goals need more

₹7,304 a month

The extra amount you would need to put away every month, from now, for every goal to be fully funded.

Emergency buffer

4.4 of 6 months

How many months of essential costs your emergency savings would cover if income stopped, against the target you set.

How much more is needed

To meet every goal, you need ₹7,304 more a month.

That is about ₹2.4 L if it were invested as one amount today. Without it, your goals would fall ₹2.9 L short in future money, in the years they are due.

What goals need each month

₹63,102

What is available each month

₹48,000

● Essential ● Important ● Nice to have ● Not covered today

Some of the difference is covered later by loan EMIs that end (Car loan in 2029).

SECTION 2

Your money each month

Where your money comes from and where it goes in a typical month. Yearly items are spread across 12 months so the balance is realistic.

ITEM	PER MONTH	WHAT IT MEANS
+ Income	₹1,75,000	Take-home pay and other regular income, after tax and salary deductions.
- Regular spends	₹82,000	Household costs every month. ₹72,000 are needs and ₹10,000 are wants.
- Loan EMIs	₹12,000	EMI (equated monthly instalment): the fixed monthly repayment on a loan.
- Investments from take-home	₹15,000	Money you invest every month, such as a SIP (systematic investment plan) in mutual funds. EPF or NPS taken from salary before take-home is not counted again.
- Insurance premiums	₹3,833	The monthly share of what you pay for health and life insurance.
+ Yearly income, monthly share	₹12,500	Bonuses and other yearly income, divided by 12.
- Yearly spends, monthly share	₹21,667	School fees, festivals and other yearly costs, divided by 12.
= Monthly balance	₹53,000	What is free each month. It goes first to the emergency fund (if you set an amount), then to your goals.

₹23,000 a month in EPF / NPS is deducted from salary before take-home pay, so it is already out of your income above. It still counts toward the goals it is linked to.

Monthly investments		
Money you put away every month, and the goal each amount is for. These keep growing toward that goal.		
EPF (employee + employer) (from salary)	Retirement	₹18,000
Meera's NPS (from salary)	Retirement	₹5,000
Equity SIP	Home down payment	₹10,000
Monthly stock buying	Not linked to a goal	₹3,000
Crypto	Not linked to a goal	₹2,000

Insurance

Cover is the most the insurer would pay. The premium is what you pay to keep the policy.

POLICY	TYPE	COVER	PREMIUM
Family floater	Health	₹10 L	₹28,000 a year
Arjun's employer cover Through employer	Health	₹5 L	—
Arjun's term plan Covers Arjun	Term life	₹1 Cr	₹1,500 a month

Emergency fund

4.4 months covered. The target is 6.

An emergency fund is money kept easy to reach for surprises such as a job loss or medical bill. The target counts needs, loan EMIs and insurance premiums only, not wants.

SECTION 3

Your goals

Each goal is shown with what it costs today, what it will cost when it is due, and how it is being funded. Goals are funded in priority order (Essential first), then by date.

- Today's money
- Future money, after price rises or growth

HOW TO READ EACH GOAL

Cost today: what the goal would cost if you paid for it now. **Cost when due:** the same goal in the year it happens, after prices rise. **Already working toward it:** what the savings, monthly investments and one-off amounts linked to this goal may grow to by then. **Still needs each month:** the extra you would need to invest every month, from now, to close the rest. **Covered by your balance:** how much of that your monthly balance can pay for.

Home renovation

Essential

one-time spend

Due 2028

Cost today	Cost when due	Already working toward it	Still needs each month	Covered by your balance
₹4 L	₹4.5 L	₹0	₹17,526	₹17,526

Projected ₹4.5 L of ₹4.5 L by 2028 · assumes 6.5% a year on new amounts

Fully funded

Anaya's higher education

Essential

Due 2039

Cost today	Cost when due	Already working toward it	Still needs each month	Covered by your balance
₹20 L	₹54.4 L	₹12.9 L	₹13,396	₹5,597

Projected ₹54.4 L of ₹54.4 L by 2039 · assumes 10.0% a year on new amounts

Fully funded

Includes ₹513 of extra savings carried over from Home down payment.

Also receives ₹12,000 a month later, from loan EMIs that end.

Retirement

Essential

Due 2050

Yearly need today	Total needed at retirement	Already working toward it	Still needs each month	Covered by your balance
₹6 L	₹5.44 Cr	₹2.84 Cr	₹23,187	₹23,187

Projected ₹5.44 Cr of ₹5.44 Cr by 2050 · assumes 10.0% a year on new amounts

SECTION 4

Retirement

After you stop working, your savings have to pay for living costs every year. This section estimates how much you may need by then, and how long the money may last.

● Today's money ● Future money, after price rises or growth

Retire in

2050 (age 60)

24 years from now

Monthly need today

₹50,000

In today's prices

Monthly need at 60

₹2 L

The same lifestyle, after prices rise

Total needed at 60

₹5.44 Cr

To last until age 85

With what is set aside today, money is projected to last until age 85.

Still needs each month

₹23,187

Extra to invest monthly, from now, for retirement

Covered by your balance

₹23,187

How much of that your monthly balance can pay

HOW THIS IS WORKED OUT

1. Your monthly spending in retirement is entered in today's prices. It is grown by inflation until you retire, which gives the monthly need at 60.
2. The total needed is the amount that, while still invested at the "return after retirement" rate, can pay that need every year until age 85, with the need itself rising each year.
3. The chart builds up savings linked to retirement (including EPF / NPS contributions and what your balance covers), then takes out one year of spending at a time from age 60. Where the line reaches zero is when money is projected to run out. Retirement uses the age of the first person entered. A partner's separate retirement timeline is not included yet.

SECTION 5

What you have and what you owe

Your savings, investments and property at today's value, what each one is for, and the loans against them.

You have

₹29.3 L

You owe

₹4.2 L

Net worth (have minus owe)

₹25.1 L

What you have			
ITEM	TYPE	LINKED TO	VALUE TODAY
Joint savings account	Savings account	Emergency fund	₹2.4 L
Fixed deposits	FD / RD	Emergency fund	₹1.5 L
Arjun's EPF	EPF	Retirement	₹9.5 L
Meera's NPS	NPS	Retirement	₹2.1 L
Equity mutual funds	Mutual funds / SIP	Home down payment	₹8.5 L
Direct shares	Stocks / shares	Not linked to a goal	₹1.8 L
Gold jewellery	Gold	Not for goals	₹3.5 L
"Linked to" shows which goal each item is set aside for, so nothing is counted twice. "Not for goals" means items you don't plan to sell, like jewellery or your home.			

What you owe				
LOAN	OUTSTANDING	EMI	INTEREST	LAST EMI
Car loan	₹4.2 L	₹12,000	9.2%	2029
Outstanding is what is still to be repaid. When a loan's last EMI year is given, that EMI is counted toward goals from then on.				

Your current mix

What you have today, grouped by asset class.

ASSET CLASSES, IN PLAIN WORDS

Equity: shares, equity mutual funds and NPS. Can grow faster over many years but can rise and fall sharply along the way.

Debt: bank savings, fixed deposits, PPF, EPF. Steadier, with more predictable but usually lower growth.

Gold: jewellery, coins, gold funds or bonds. Often holds value when other things fall.

Real estate: land and property. Can grow and earn rent, but is slow and costly to sell.

Speculative: crypto. Prices can swing very widely.

SECTION 6

What's missing

Facts from your numbers that are worth a look: shortfalls, gaps in protection, and money not yet linked to a goal.

**Family trip to Japan: ₹7,304 a month short**

Projected ₹67,140 against a future cost of ₹3.6 L in 2029.

**Emergency fund is ₹1.4 L below 6 months of costs**

4.4 months covered today.

**Health cover: ₹15 L in total**

4 people in the household. ₹5 L of it is through an employer, which usually ends when you leave the job or retire.

**Life cover: ₹1 Cr · Arjun: ₹1 Cr · Meera: none**

4.4× yearly household income. Outstanding loans: ₹4.2 L.

**₹12,000 a month is freed when the Car loan ends in 2029**

Counted toward goals still short from then on.

**₹513 carried to Anaya's higher education**

Extra savings from Home down payment beyond what it needs.

**Not linked to any goal: ₹1.8 L in savings and ₹5,000 a month in investments**

These aren't counted toward any goal yet.

A shortfall or gap

Information

Options to explore

Changes that would reduce the monthly gap of ₹7,304, largest effect first. Each one is worked out on its own. These are calculations to help you think it through, not recommendations.

Pause nice-to-have goals

Frees their monthly amounts for other goals.

This alone would close the gap: every goal funded.

Gap falls by ₹7,304 a month**Raise the monthly amounts 6% each year, in line with income**

You expect income to grow 6% a year.

This alone would close the gap: every goal funded.

Gap falls by ₹7,304 a month**Link unassigned savings to Family trip to Japan**

₹1.8 L saved and ₹5,000 a month, currently not linked to a goal.

This alone would close the gap: every goal funded.

Gap falls by ₹7,304 a month

Retire 2 years later, at 62

More years to save and fewer years to fund.
The gap would become ₹555 a month, with 4 goals fully funded.

Gap falls by ₹6,748 a month

Move Family trip to Japan to 2031

Two more years to save for it.
The gap would become ₹3,745 a month, with 4 goals fully funded.

Gap falls by ₹3,559 a month

Spend 25% less on wants

₹10,000 to ₹7,500 a month on spends marked as wants.
The gap would become ₹4,804 a month, with 4 goals fully funded.

Gap falls by ₹2,500 a month

Lower the Family trip to Japan budget by 20%

₹3 L to ₹2.4 L in today's prices.
The gap would become ₹5,505 a month, with 4 goals fully funded.

Gap falls by ₹1,799 a month

SECTION 7

Assumptions, words explained, and notes

Assumptions used

Every result depends on these. They are estimates, not predictions, and can be changed in the app.

Return on new amounts, goals 7+ years away	10% a year
Return on new amounts, goals up to 3 years away	6.5% a year
Return after retirement	7% a year
General inflation (price rise)	6% a year
Education inflation	8% a year
Healthcare inflation	9% a year
Emergency fund target	6 months of essential costs
Tax	Not included (open assumption)
Calculation version	v0.4

Goals 3 to 7 years away use a return between the first two rates.
Existing savings grow at a rate set for each type.

Open assumption: tax

All returns and results are before tax. Tax on interest, capital gains and withdrawals is not included, so real amounts may be lower than shown.

Simplifications

- Incomes and monthly investments stay flat, unless an option explores raising them.
- The emergency set-aside continues even after its target is reached.
- Retirement uses the first person's age only.
- Market returns vary from year to year; these figures use steady average rates.

About this report

Kosh is a calculator. It does not provide investment, tax or financial advice, and does not recommend any product. Created on your own device on 27 September 2026, 7:17 pm; none of your numbers were sent anywhere. Update it whenever your income, family, loans or goals change.

Words explained

Take-home pay

Salary received in your bank account, after tax, PF and other deductions.

Inflation

The rate at which prices rise each year. At 6%, something costing ₹1,00,000 today costs about ₹1,79,000 in 10 years.

Return

How much savings or investments grow each year, as a percentage.

Today's money / future money

The same goal expressed at today's prices, or at the prices expected in the year it happens.

SIP

Systematic investment plan: investing a fixed amount every month, usually in a mutual fund.

EMI

Equated monthly instalment: the fixed monthly repayment on a loan.

EPF / PPF / NPS

Employees' Provident Fund, Public Provident Fund and National Pension System: long-term savings schemes, mostly for retirement.

Net worth

Everything you own minus everything you owe.

Emergency fund

Money kept easy to reach for surprises, sized in months of essential costs.

Needs and wants

Needs are essential costs (rent, food, bills). Wants are nice-to-have spends (eating out, shopping).

Term insurance

Life insurance that pays only if the insured person dies during the policy term. It has no savings part.

Health cover

The most a health insurance policy will pay for hospital treatment in a year.

Retirement corpus

The total savings needed on the day you retire to pay for the rest of retirement.

Before tax

Tax on interest, gains and withdrawals is not taken off. Real amounts after tax may be lower.
